

doughboy

WEBSITE DESIGN BRIEF

The AI Profit Agent for Independent Restaurants

Vanilla #F4E1C1

Espresso #363031

Rumba Red #7C2439

Prepared for Development Team | Brand & UX Direction

Confidential

Brand identity

BRAND PERSONALITY

Warm. Direct. Knows its stuff.

Doughboy speaks like a trusted friend who happens to be a restaurant finance expert.

Never corporate. Never condescending. Always specific with dollar amounts.

Think: "Hey, your chicken parm is losing you \$1.40 per plate. Here's what to do."

The brand name is intentionally playful — dough = money + dough = food.

COLOR PALETTE

Vanilla

#F4E1C1

Backgrounds, warmth,
trust, approachability

Espresso

#363031

Text, headers, depth,
premium feel

Rumba Red

#7C2439

CTAs, accents, urgency,
brand signature

TYPOGRAPHY DIRECTION

DISPLAY / HEADINGS

Fraunces 900

Google Fonts — variable, free, serif with personality

BODY / UI

DM Sans 400/600

Google Fonts — clean, modern, highly legible

VOICE EXAMPLES

Instead of:

"Your food cost ratio has exceeded optimal thresholds."

We say:

"Your food cost hit 38% — that's \$420/mo walking out the d

Instead of:

"Access your analytics dashboard for insights."

We say:

"Text us 'how did we do last night?' and we'll tell you."

Instead of:

"Optimize your labor allocation."

We say:

"Send someone home at 3pm — you're overstaffed by one."

The chat experience

Your pocket CFO. Not another dashboard.

Restaurant owners live on their phones. So does Doughboy.

Onboarding: 10 minutes to value

The Zeigarnik effect: incomplete sequences create psychological urgency to complete them.

Step 3 is always highlighted as 'active' — the visitor's brain wants to finish it.

Psychology note for developer:

Step 3 should always pulse/glow subtly on page load. The active state draws the eye and creates a completion drive — visitors feel compelled to reach it.

Pricing: anchored to save

Anchoring bias: show the \$2,800/mo loss BEFORE the \$49-99 price. The subscription feels trivially small by comparison. Loss framing converts 2x better than gain framing.

YOU'RE LOSING

~\$2,800/mo

in hidden margin waste

vs.

DOUGHBOY COSTS

\$49-99/mo

pays for itself in the first week

Starter

\$49 /mo

FOOD COST (WAS 35%)

Psychology playbook

Every design choice is backed by behavioral research. Here's the cheat sheet.

1. Loss aversion *Kahneman & Tversky, 1979*

Losses hurt 2x more than equivalent gains. The ticking leak counter shows money draining in real time — visitors feel the pain of inaction.

Implementation: Live counter, red dollar amounts, 'leaking \$2,847/mo' framing

2. Anchoring bias *Tversky & Kahneman, 1974*

The first number sets the frame. By showing \$2,800/mo lost before showing \$49-99/mo price, the subscription feels trivially small.

Implementation: Anchor box on pricing page, loss vs. cost comparison

3. Zeigarnik effect *Bluma Zeigarnik, 1927*

Incomplete tasks create mental tension. The onboarding steps show progress to 'Step 3' but never complete — visitors feel pulled to finish.

Implementation: Active step glow, pending steps, progress indicators

4. Social proof (local) *Cialdini, 1984*

People follow others like them. '12 Jacksonville restaurants' is more persuasive than '10,000+ users' because it's specific and nearby.

Implementation: Avatar stack, local count, testimonials with names/locations

5. Endowment effect *Thaler, 1980*

People value things more once they own them. 'Find MY leaks' language makes the visitor feel ownership before signing up.

Implementation: Possessive CTA language, personalized chat demo

6. Curiosity gap *Loewenstein, 1994*

The gap between what we know and want to know drives action. 'Your chicken parm is losing money' — how much? They have to find out.

Implementation: Teaser insights in chat mockup, 'see it work first' CTA

Technical direction

STACK

Framework	Next.js 14+ (App Router) — deployed on Vercel
Database	Supabase (Postgres + Auth + Realtime)
AI	Claude API (Haiku for lookups, Sonnet for recommendations)
Styling	Tailwind CSS + Fraunces (serif) + DM Sans (body)
SMS/Email	Twilio (SMS alerts) + SendGrid (email reports)

KEY INTERACTIONS TO BUILD

Hero leak counter	Animate on scroll-into-view. Tick every 3-4 seconds. Use requestAnimationFrame.
Chat demo	Stagger messages with IntersectionObserver. Each message fades up 0.6s apart.
Onboarding steps	Step 3 pulses with CSS keyframes. glow animation on box-shadow.
Pricing anchor	Counter starts at \$0, counts up to \$2,847 when section enters viewport.
CTA buttons	Rumba Red (#7C2439). Hover darkens to #5E1A2B. 2px translate-y on hover.

MOBILE-FIRST NOTES

Breakpoints	sm: 640px, md: 768px, lg: 1024px — design mobile-first
Phone mockup	Center at full-width on mobile, side-annotate only on lg+
Pricing cards	Stack vertically on mobile, 2-col on md+
Touch targets	All CTAs minimum 44px tap target

PERFORMANCE

Fonts	Subset Fraunces (latin only) + preload. DM Sans via next/font.
Images	Zero images in hero. SVG logo only. WebP for testimonial photos.
Animations	CSS-only where possible. No heavy JS animation libs.
Target	Lighthouse 95+ on mobile. < 2s FCP.

Note to developer:

The live mockups in this brief are the source of truth for layout, copy, and interactions. Match them pixel-for-pixel. The psychology is baked into every detail.
